chances $_{0}t$ failure of crops over an extensive area like a Taluqa or Block were almost "nil. They had also pointed, out that fixaion o"f threshold yield Qf 80 per cent of last five'. years' average would be meaningless in the context of the continuously rising productivity in the State. They had in fact stated that threshold yield should be 100 per cent of the average yield of last three years. Government of India had set up u Committee to examine these and other suggestions for amendment of the scheme. Based on the recommendations of the Committee, Central Government have decided as under: —

(i) There will be three different rates of indemnifiable limits lor wheat land 'paddy, i. e. 80 per cent, 85 per cent and| 90 per cent based on the average yield of last three years depending upon star . bility of production, subject to the stipulation that a further review relating to indemnifiable limits beyond 90 per cent would be deferred for two to three years (Effective from Rabi 1986-87).

(ii) The States should have the freedom to opt for the scheme; this option should be with reference to the district as the unit. Option once exsreised in respect of a district should not be allowed to be changed or withdrawn for a period of 3 years-effective from Kharif 1987.

These decisions have been conveyed to the State Governments.

New. Sugar mffls in Punjab

*153. SHRI HARVENDRA SINGH HANSPAL: '.. '
